07 AI UGC ADS

Posters

A series of minimal yet high-impact posters designed to capture attention through composition, contrast, and restraint. The concepts and art direction are entirely my own, with AI used as a creative tool to speed up execution. This workflow helped cut production time by nearly 50% while preserving visual quality and creative intent.

AI Product Shoot

Frames made with nanobanana pro
and animated with veo 3.

[Click here to watch video](#)

This Oakley eyewear ad was created entirely with AI, set in a desert environment to highlight durability and performance. Blowing dust and sand emphasize lens protection and UV resistance, while the stable frame design communicates strength and reliability. The concept delivers a rugged, performance-driven story with realistic detail, created within minutes.

Looks expensive?

It's AI.

Wild Stone reimagined through smart creativity.

Traditional ad shoots

weeks of planning + huge budgets.

AI ads

minutes of precision, zero compromises on luxury.

Cost-cutting without cutting class.

Prompt
Idea

Cinematic close-up of the uploaded perfume bottle spraying a fine mist toward the neck under harsh side light, deep black background, red satin slip dress visible.

85 mm f/1.4, golden highlights, realistic skin texture, mist physics, and glass refraction — luxury editorial style with perfect product fidelity.

Because modern
brands don't just
adapt they evolve.

Efficiency is the new luxury

The Wild Stone
vision,

powered by AI.

**WILD
STONE**

Frames made with seedream and animated with runway ml.

You've seen
the vibe.

Carousels

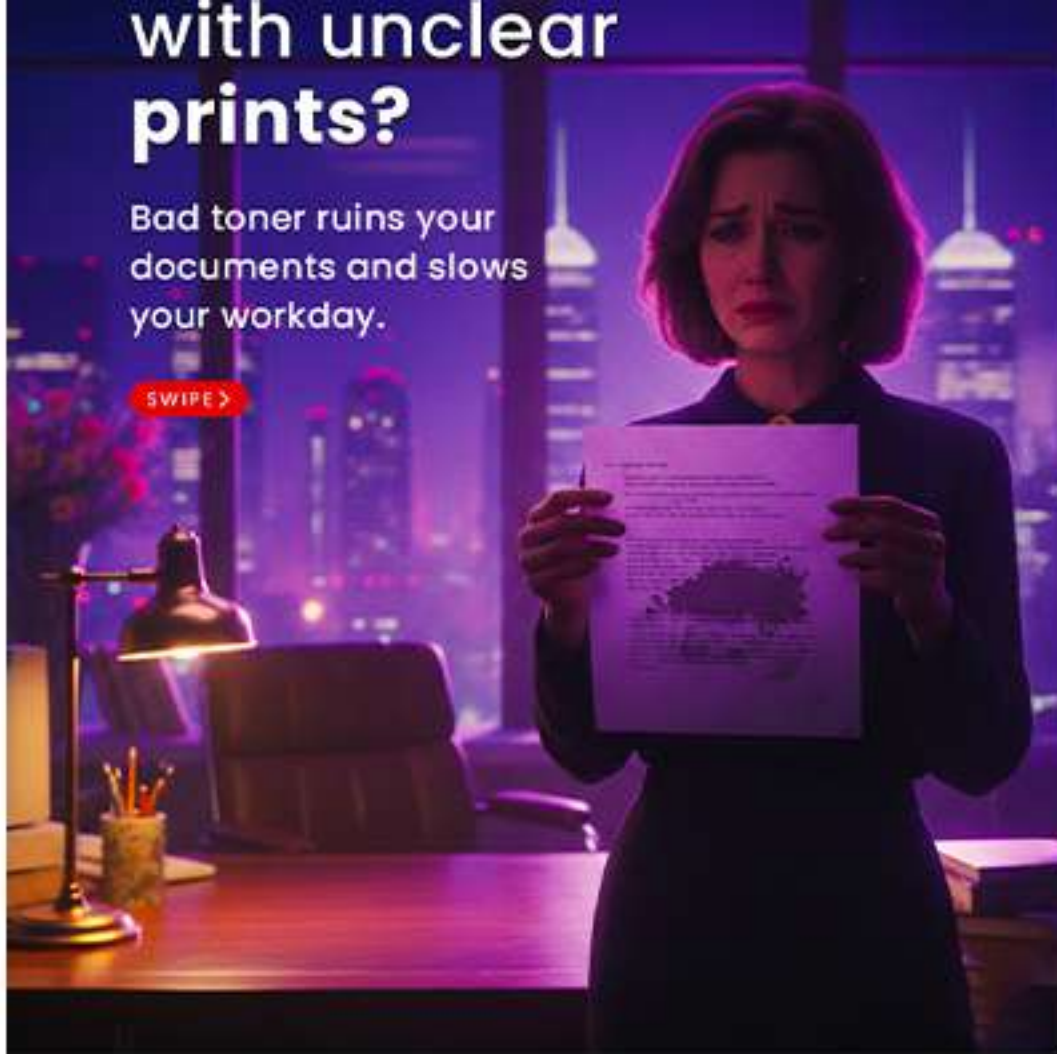

Struggling

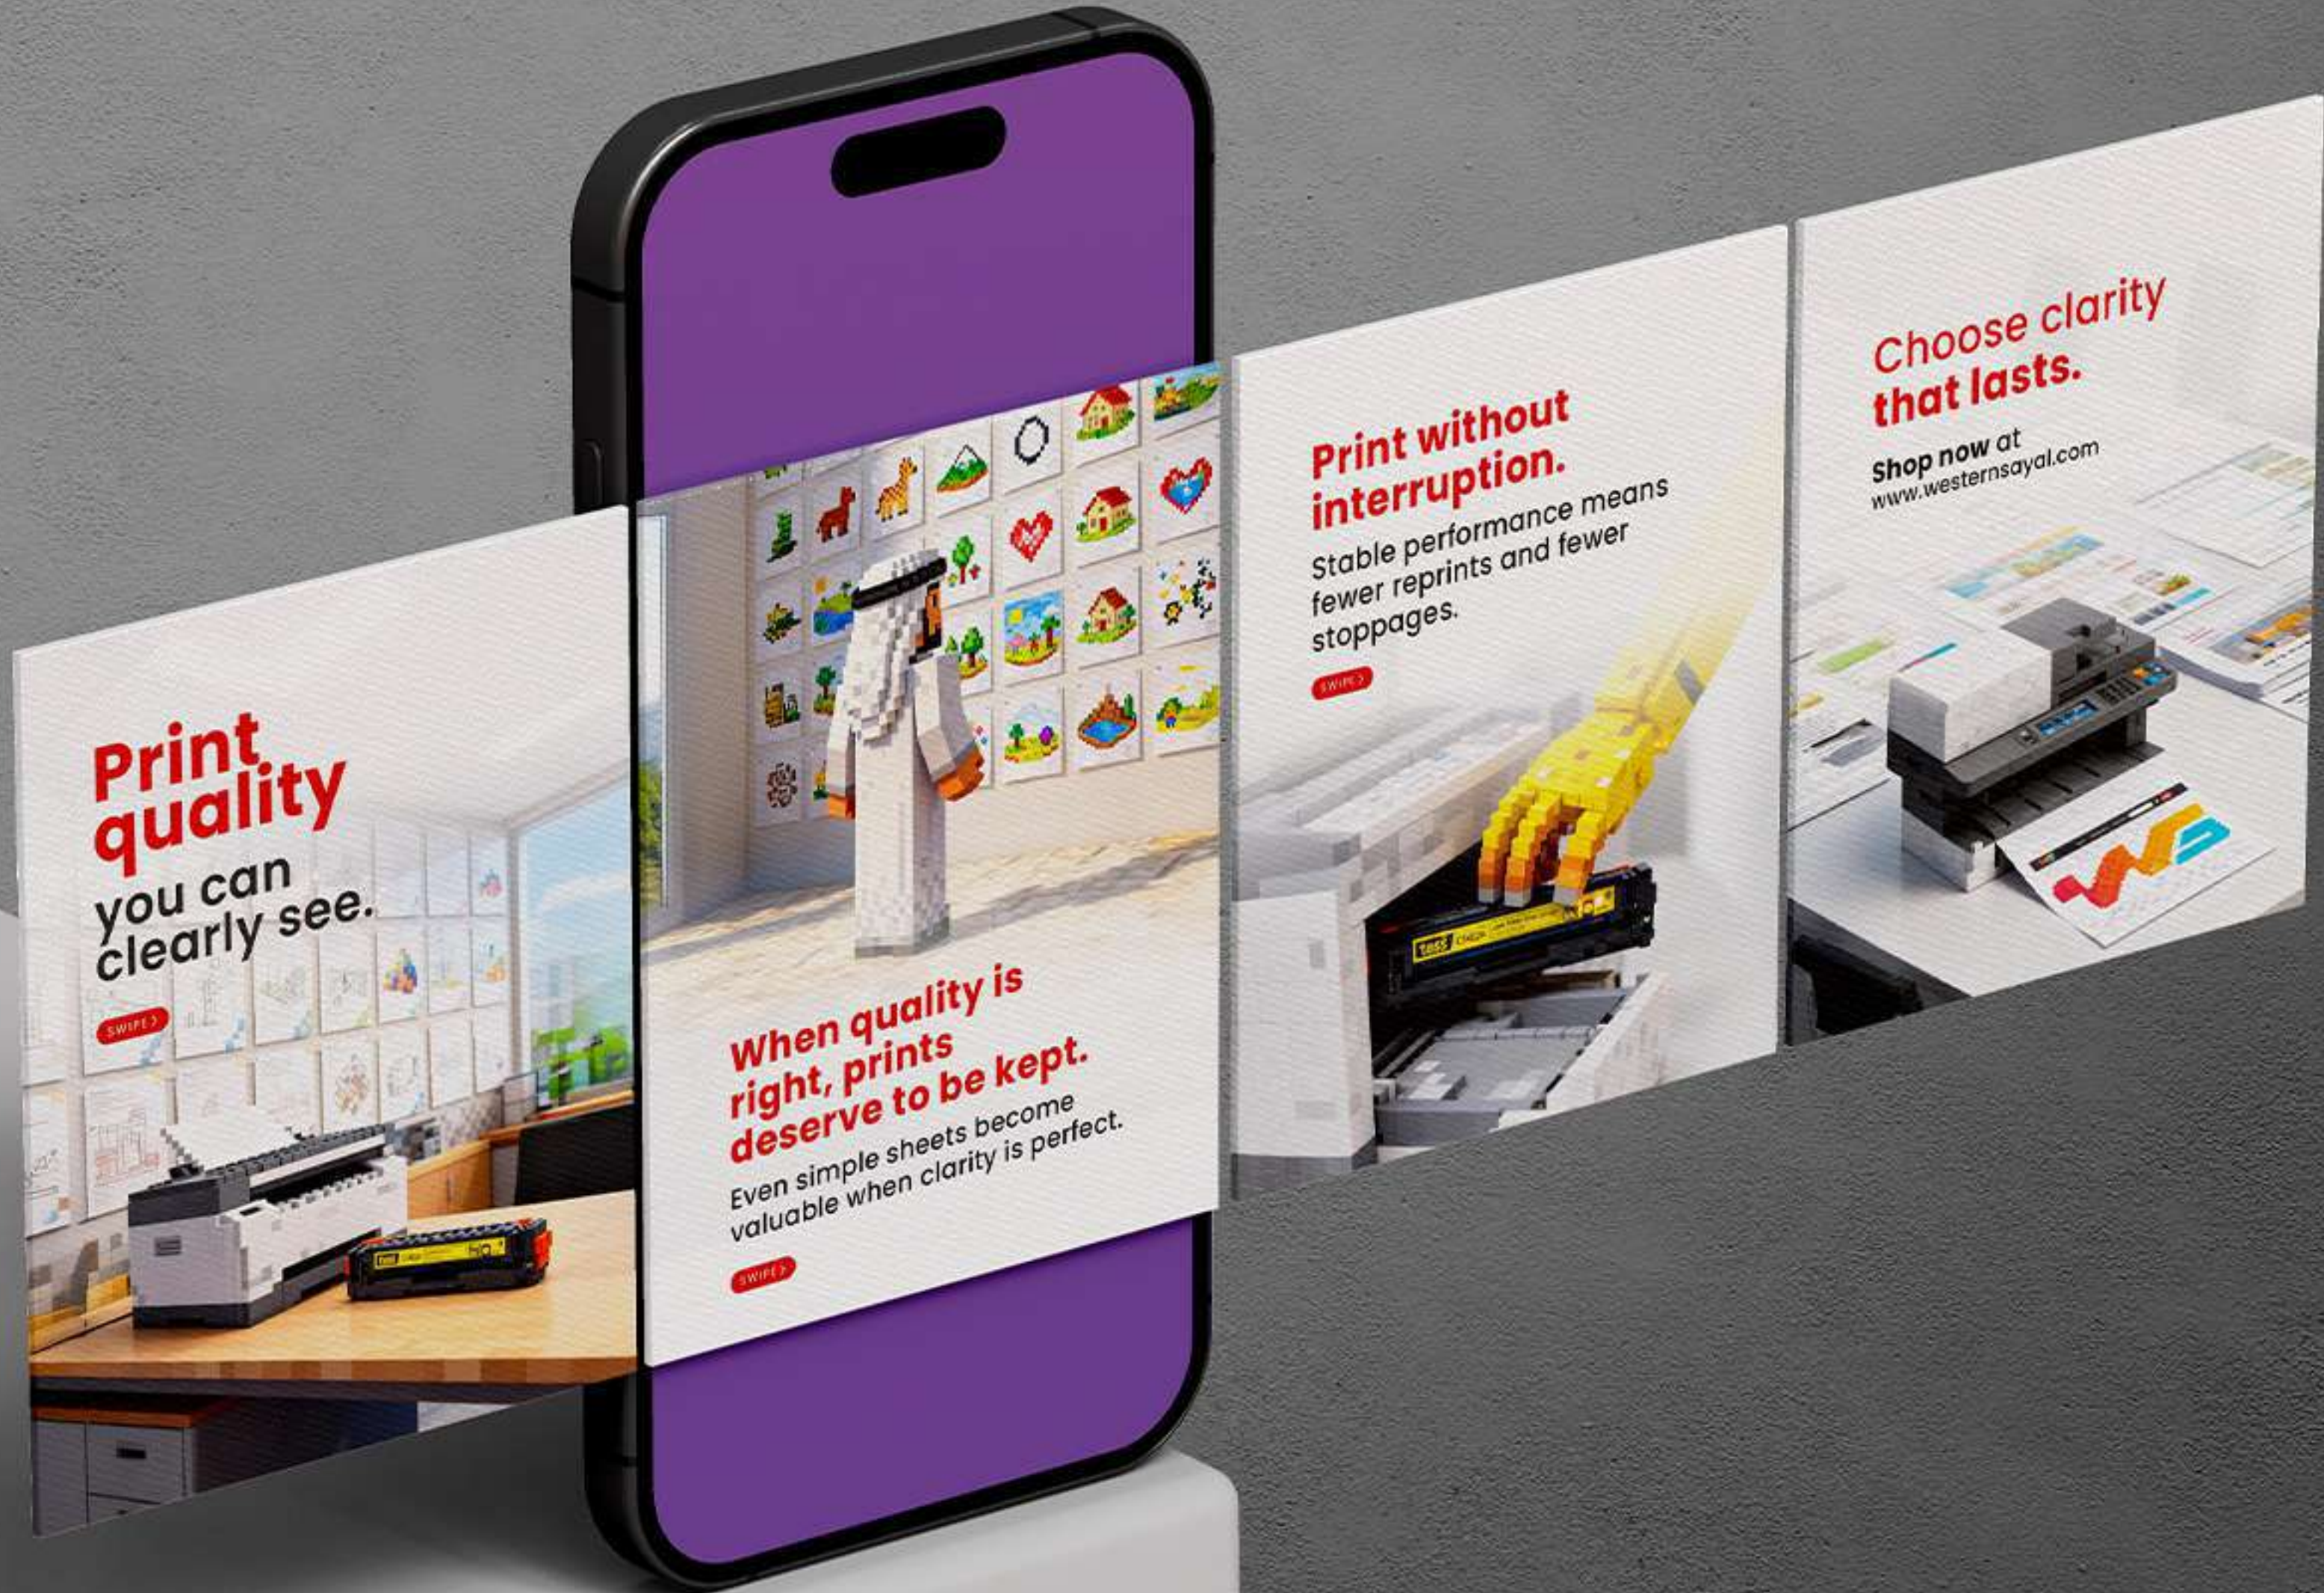

It's not the

Carousels are powerful because they tell a story in layers, increase time spent on content, and improve brand recall through sequential visuals. For Westerns Sayal, I designed this carousel to highlight the Tass Toner's benefits step by step, keeping the visuals clean, consistent, and scroll-stopping.

Print quality
you can clearly see.

SWIPE >

When quality is right, prints deserve to be kept.
Even simple sheets become valuable when clarity is perfect.

SWIPE >

Print without interruption.

Stable performance means fewer reprints and fewer stoppages.

SWIPE >

Choose clarity that lasts.

Branding

Salamath

Digital Observations Made Simple

Logo Presentation

Logo Meaning

The overall shape is rounded and enclosed, suggesting containment, protection, and security.

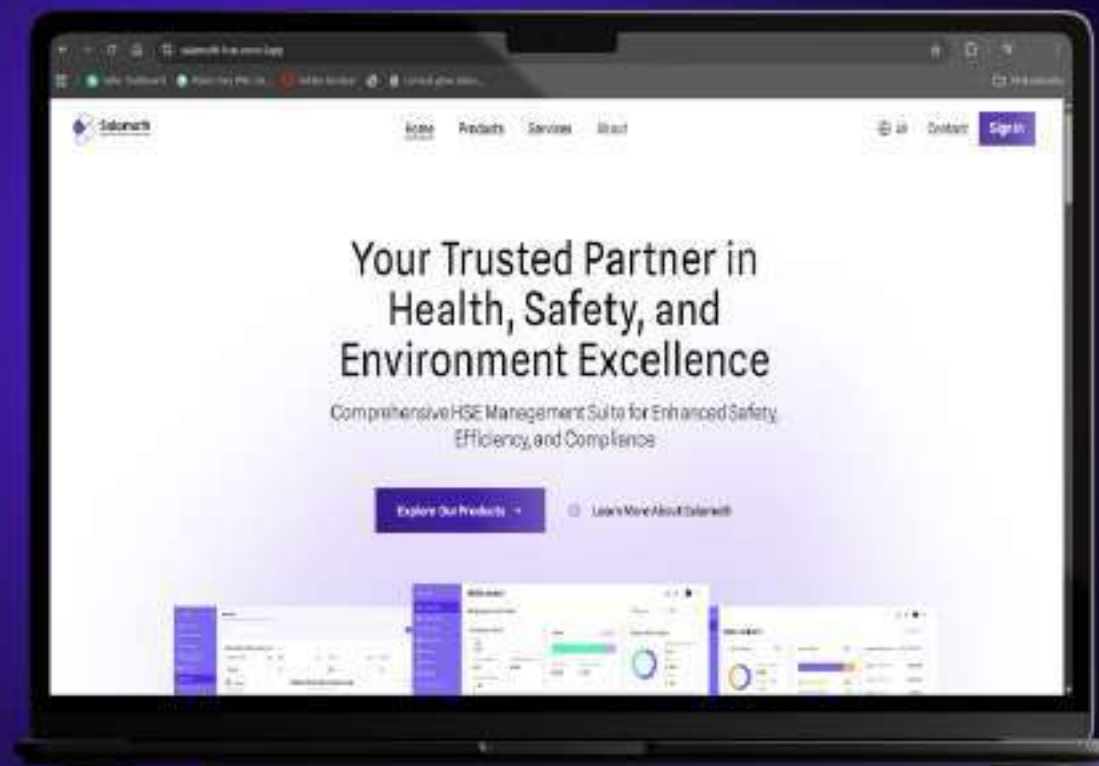

Salamath

Digital Observations Made Simple

Origin: The name "Salamat" (or "Salamath") is of Arabic origin.

Meaning: The root word is associated with concepts like "peace," "safety," "security," and "well-being" or "health."

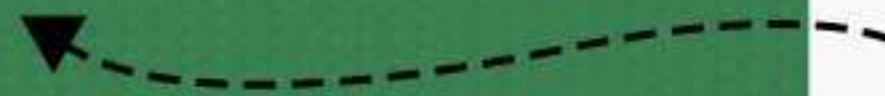

www.salamath-hse.vercel.app

I developed a simple, minimal branding system for Salamath, a brand rooted in the well-being of labour communities through technology. The visual language is intentionally restrained and clear, designed to reflect trust, accessibility, and human care. Every element aligns with Salamath's vision of empowering workers through their digital platform and app, creating a seamless blend of social impact and modern tech.

AI Fashion

Crafted with Nano Banana Pro using a precisely structured prompt, ensuring accurate fabric detailing, construction, and stitch-level fidelity.

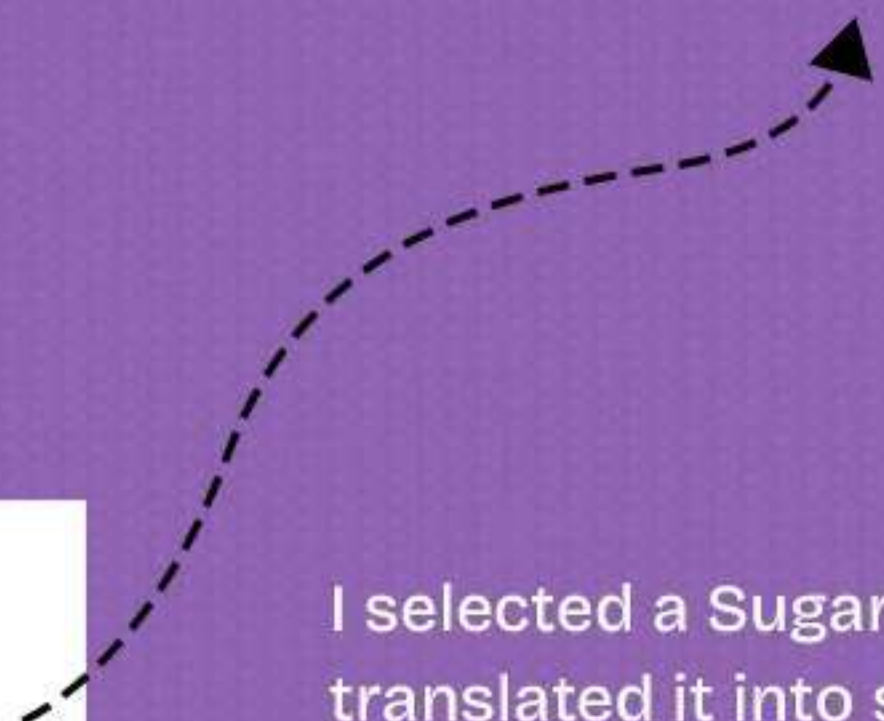

This visual was created in minutes using AI.
A process that traditionally demands days
or weeks of production time.

Cuts time and cost, not
quality or accuracy.

AI Beauty Products

I selected a Sugar brand lipstick and translated it into simple, realistic product visuals designed for websites and social media. The focus was on natural skin realism, authentic lip texture, and precise bottle detailing. Using a precision-driven AI workflow, visuals that typically require days of shooting and retouching were created within minutes, without compromising quality or accuracy.

AI UGC ADS

Realistic UGC-style ads can now be created within minutes using AI. AI models can present outfits, promote products like bags or sunscreen, and even demonstrate usage naturally on camera. This approach removes the need for repeated shoots, creators, and long production cycles, while still delivering authentic expressions, believable body language, and product focused storytelling. What once required multiple creators, locations, and weeks of coordination can now be produced quickly with precision, consistency, and creative control.

THANK

YOU!

Thank you for taking the time to view this. I've shared only a few works here, but with AI, almost anything we imagine is now possible. The limits are no longer technical, only creative. Let's connect and build a bold, future-forward creative journey together.
